The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by JP9154485, JP9103242, or JP58198248.

JP9154485, JP9103242, and JP58198248 all teach a processed cheese-like food that is heated and emulsified at an upper limit temperature of about 120° C (see corresponding abstracts).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3, 4, and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP9154485 or JP9103242.

JP9154485 and JP9103242 disclose a processed cheese-like food that is heated and emulsified at an upper limit temperature of about 120° C and then cooled (see corresponding abstracts).

The claims differ as to the specific cooling conditions.

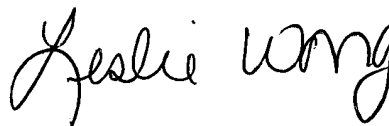

In the absence of a showing to the contrary, the cooling conditions are no more than that required for a quick cool after heat treatment, where selection of cooling conditions is well-within the skill of the art.

It would have been obvious to a person of ordinary skill in the art, at the time the invention was made, to use the claimed cooling conditions in that of either JP9154485 or JP9103242 because a quick cool after heat treatment is conventional and well known in the art.
